

Dear Sir or Madam, hope you're having a great day.

My name is Alexander. I want to join you for an internship / Junior position in QA. To stay and grow as a great professional. Now i am a beginner Tester and i would be interested to find a company where i can learn a lot of technologies.

A little bit about my vision.

I focus on, what value i am bringing to the team every single day. Encourage my co-workers, my teammates to produce value. What can i learn from my teammates and at the same time like to bring value to people, so people can learn from me.

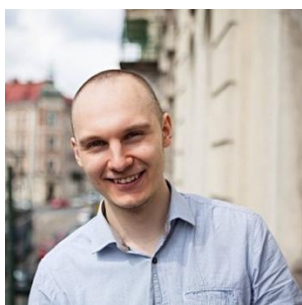

Go through iterations of working, doing things, researching and improving myself. Agile methodology should't only be used in a software development cycle, we can use it every single day.

Make a decision, i ask myself, is what data do i need in order to make this decision. I look at my past, figure out and identify where can improve, where could have done a better job.

Know how an owner behaves and how an employee behaves. When something is down, when there is a problem, i am on it, doing anything that i can do.

Thank you for your time.

Kind regards,
Alexander
